Buckingham Woods 2023 Drinking Water Compliance Report

Period Covering: January 1 to December 31, 2023

Annual and Municipal Summary Reports (Prepared in accordance with Section 11 and Schedule 22 of Ontario Regulation 170/03)

# **TABLE OF CONTENTS**

# INTRODUCTION

This report has been prepared by the Township of Clearview to satisfy the requirements of Section 11: Annual Report and Schedule 22: Summary Reports for Municipalities of Ontario Regulation 170/03 (O. Reg 170/03).

The report covers the period from January 1 to December 31, 2023, for the following municipally owned and operated drinking water system:

• Buckingham Woods Drinking Water System

# **Drinking Water System Information**

| Drinking Water System Number:            | 250001420                                 |
|--|---|
| Drinking Water System Category:          | Small Municipal Residential               |
| Drinking Water System Classification:    | Water Supply and Distribution Class 1     |
| Municipal Drinking Water Licence Number: | 099-104, Issued June 25, 2020             |
| Drinking Water Works Permit Number:      | 099-204, Issued June 25, 2020             |
| Permit to Take Water:                    | P-300-9059763831, Issued January 11, 2020 |

# **Report Content**

Under Section 11 of O. Reg 170/03, the Owner of a drinking water system is required to prepare an annual report covering the period of January 1 to December 31 by February 28<sup>th</sup> of the following year. The annual report must contain the following information:

- A brief description of the drinking water system, including a list of water treatment chemicals used.
- A summary of any reports made to the Ministry of Environment, Conservation and Parks (MECP) pertaining to Adverse Water Quality Incidents (AWQI).
- A summary of test results required under O. Reg. 170/03, or by an approval, the municipal drinking water licence or an order, including an Ontario Water Resources Act order, if tests were not required during this period, a summary of the most recent test results.
- A description of corrective actions taken in accordance with Schedule 17 or 18 of O. Reg. 170/03.
- A description of any major expenses incurred to install, repair or replaced required equipment.
- A statement of where a report prepared under Schedule 22 will be available for inspection by the public, without charge.

Schedule 22 of O. Reg 170/03 requires that an Annual Summary Report for Municipalities be provided to Council by March 31<sup>st</sup> each year. The report summarizes at a high level, the regulatory activity of the drinking water system for the preceding year. It must contain the following information:

- List of requirements of the Act, regulations, the system's approval, drinking water works permit, municipal drinking water licence, and any orders applicable to the system that were not met at any time during the period covered by the report and specify the duration of the failure and describe the measures taken to correct the failure.
- A summary of quantities and flow rates of the water supplied during the period covered by the report, including monthly average and maximum daily flows.
- A comparison of the summary of quantities and flow rates to the rated capacity and flow rates approved in the system's approval, drinking water works permit or municipal drinking water licence.

## **Report Format**

This report provides details on measures taken by staff to ensure compliance with Terms and Conditions of the control documents, Act, Regulations, or any orders the system may have been under during the reporting period.

Rated capacities and flows approved in the system's certificates are summarized. There are discrepancies between the capacities allowed in some control documents. Exceeding the Drinking Water Licence or Permit to Take Water flow rates can be considered a contravention of legislation. For this reason, we strive to keep the flow rates below the lower of the control document limits.

A summary of quantities and flow rates including monthly averages and maximum daily flows are included. This flow comparison is to allow for a basic overview of the system's performance and allows for review and planning of possible future expansions if required. The actual pumping capacity has been used to calculate the percentage of overall capacity because in some cases actual capacity has decreased over time and is not represented realistically by the system control documents.

# **Report Availability**

In accordance with Section 11 of O. Reg. 170/03, a copy of the report is available to the public, free of charge, at the following locations:

• Township of Clearview's website www.clearview.ca

- By request at the Township Administration Building, located at 217 Gideon St., Stayner.
- By request at the Township Public Works Building, located at 5833 County Road 96, Stayner.

The public is advised of the report's availability, without charge, and how a copy may be obtained via local newspaper ads, the Township of Clearview's website and social media feeds by February 28<sup>th</sup>.

# **QUALITY MANAGEMENT SYSTEM**

## **Quality Management System Policy**

#### Township of Clearview Water Department Quality Management System Policy Statement

It is Clearview Township's aim to ensure safe drinking water to the end user within all Township - operated water systems. Through this policy the Township commits to follow all applicable legislation & regulations that are associated with the safety and the delivery of Drinking Water. Through maintenance and continual improvement to the Quality Management System the Township is identifying, measuring, controlling and improving the various core water works processes that will ultimately lead to improved water works performance.

# **Quality Management System Summary**

Clearview's Quality Management System (QMS) is legislated under the Drinking Water Quality Management Standard (DWQMS) through the Safe Drinking Water Act. It utilizes a set of coordinated activities to direct and control the department to continually improve the effectiveness of its performance.

The annual Management Review meeting was held to evaluate the continuing suitability, adequacy, and effectiveness of the QMS. The meeting occurred on March 24, 2023, and a subsequent report to council was prepared and submitted for information.

Internal audits were conducted by trained waterworks employees to ensure that the QMS conforms to the requirements of the Township's Operational Plan and the DWQMS. These requirements include ensuring that the QMS has been effectively implemented and properly maintained. The 2023 audit was conducted between February 21<sup>st</sup> and March 10<sup>th</sup>, 2023. Two Opportunities for Improvement (OFI) were noted in the report.

Since 2012, Intertek - SAI Global has been retained to provide external auditing services of the DWQMS for Clearview. In 2023, Clearview was due for a re-accreditation audit. The systems audit portion was completed on April 3, 2023, with one OFI being noted in the 10-page report. From May  $1^{st}$  to May  $3^{rd}$ , the auditor conducted an on-site verification audit for the six drinking water systems. Upon completion, a 14-page report was received on May 3, 2023, with five OFIs identified. The purpose of this audit was to determine whether the drinking water QMS conforms to the requirements of the DWQMS Version 2, that it has been effectively implemented and maintained, and that accreditation can continue to be offered to the Township as the operating authority for the drinking water systems. The result was that The Corporation of the Township of Clearview's QMS is considered effectively implemented and meets all the requirements of the standard relative to the scope of certification and it was recommended that certification as an operating authority be continued. An updated Certificate of Registration for conforming with the requirements of Drinking Water Quality Management Standard Version 2 – 2017 was issued to the Township on November 3, 2023.

The Safe Drinking Water Act and regulations call for water works owners to continually monitor water works performance, and review levels of treatment versus current standards. The public expects that responsible owners will be diligent in their duty to care for public water supplies.

Section 19 of the Safe Drinking Water Act (Standard of Care) became effective December 31, 2012. After election of a new Council, members are invited to attend a facilitated training session to understand their responsibilities under the Act. This was conducted at a Special Council Meeting on March 16, 2023, with the Walkerton Clean Water Centre presenting their Responsibilities Under the Statutory Standard of Care – Safe Drinking Water Act course.

The Township is well organized to manage the water works system. Further, staff have been proactive to ensure all necessary measures are taken to achieve compliance with Regulations and various control documents.

# **BUCKINGHAM WOODS DRINKING WATER SYSTEM**

## **System Description**

The Buckingham Woods Drinking Water System is located at 1254 County Road 32 in the northwest corner of the Township. The facility is owned and operated by the Corporation of the Township of Clearview in accordance with the licence and permits issued by the Ontario Ministry of Environment, Conservation and Parks (MECP) and all other applicable legislation.

Source water for the Buckingham Woods drinking water

system is provided from three groundwater wells (only two of which are currently in use). Water is drawn from the wells and transported to the pumphouse where it is treated with sodium hypochlorite for primary and secondary disinfection. Sodium silicate is also added to the water for iron sequestering. It is then stored in an approx. 100 m<sup>3</sup> two-celled underground concrete water storage reservoir. Three high lift pumps provide the distribution system with water from the reservoir, based on system demand. The distribution system is comprised of approx. 2.3 km of various sized watermain, with 13 fire hydrants for flushing purposes. This system does not support fire protection. At the end of 2023, there were 49 active service connections translating to an approx. population of 125 people. When full buildout of the subdivision is complete, 62 residential properties will be served by the water system.

A computerized Supervisory Control and Data Acquisition (SCADA) system is used to continuously monitor the drinking water system and alert a certified operator should it detect a potential problem. A 35 kW standby generator provides backup power to the pumphouse and treatment equipment in the event of a power failure.

## **Water Treatment Chemicals**

Chemicals used for drinking water treatment include:

- 12% Sodium Hypochlorite
- Sodium Silicate

### Major Expenses Incurred within the Drinking Water System

• Replaced raw water flow meters (3) - \$9,250

# **OPERATIONAL CHECKS, SAMPLING AND TESTING**

All operational checks and sampling were conducted at the required frequency and locations as per Schedule 6 of O. Reg. 170/03 during the reporting period. All samples were collected by certified operators and analysis performed by accredited laboratories. No additional testing and sampling were necessary due to any requirements of an approval, order, or other legal instrument.

## **Operational Checks**

Operational checks including, treated water and distribution water free chlorine residuals, as well as source water raw turbidity are required under Schedule 7 of O. Reg. 170/03. Raw water turbidity samples are collected and analyzed monthly from each production well. The free chlorine residual in the treated water leaving the pumphouse is continuously monitored by an online analyzer connected to the SCADA system for data logging and alarming. Grab samples from various locations in the distribution system are collected twice a week and analyzed for free chlorine. Table 1 below summarizes the results for the reporting period.

| Parameter                        | Number of Samples | Min. | Max. | Unit |
|----------------------------------|-------------------|------|------|------|
| Raw Turbidity – Well # 1         | 12                | 0.10 | 0.88 | NTU  |
| Raw Turbidity – Well # 3         | 12                | 0.11 | 0.85 | NTU  |
| Treated Water Free Chlorine      | 8760*             | 0.40 | 2.13 | mg/L |
| Distribution Water Free Chlorine | 104               | 0.47 | 1.72 | mg/L |

#### **Table 1: Schedule 7 Operational Checks Summary**

\*8760 is the number used for continuous monitoring equipment.

## **Microbiological Testing**

Microbiological testing of raw source water and distribution water samples is required by Schedule 11 of O. Reg. 170/03 for small municipal residential drinking water systems. Raw water samples from each production well are collected monthly, while distribution samples are collected on a weekly basis. Laboratory results for all samples analyzed for E. coli, Total Coliforms, Background and Heterotrophic Plate Count (HPC) met the requirements and did not exceed the applicable standards set out in O. Reg. 169/03. On rare occasions, untreated raw water samples indicated the presence of bacteria. Table 2 below summarizes the microbiological and bacteriological sample results for the reporting period.

| Sample Type /  | Number<br>of | E.coliTotal ColiformCFU/100 mLCFU/100 mL |      |      |      |         |      | Number<br>of HPC | HP<br>CFU/10 |  |
|----------------|--------------|--|------|------|------|---------|------|------------------|--------------|--|
| Source         | Samples      | Min.                                     | Max. | Min. | Max. | Samples | Min. | Max.             |              |  |
| Raw – Well # 1 | 16           | 0  | 0    | 0    | 4    | NR      | -    | -                |              |  |
| Raw – Well # 3 | 12           | 0  | 0    | 0    | 0    | NR      | -    | -                |              |  |
| Distribution   | 52           | 0  | 0    | 0    | 0    | 52      | < 10 | 790              |              |  |

#### **Table 2: Schedule 11 Microbiological Testing Results**

### **Chemical Testing**

Testing performed under Schedule 13 of O. Reg. 170/03. The tables 4 through 8 below summarize the sample results for the reporting period or provide the most recent results if samples were not required to be collected during the reporting period. All sampling is of treated drinking water leaving the pumphouse, except for THM and HAA samples that are collected from the distribution system.

#### **Table 3: Chemical Sampling Frequency**

| Parameter                | Required Sampling Frequency                                  |
|--------------------------|--|
| THMs                     | Every Calendar Quarter, calculated as running annual average |
| HAAs                     | Every Calendar Quarter, calculated as running annual average |
| Nitrite & Nitrate        | Every 3 months   |
| Sodium                   | Every 60 months  |
| Fluoride                 | Every 60 months  |
| Schedule 23 – Inorganics | Every 60 months  |
| Schedule 24 - Organics   | Every 60 months  |

ODWS MAC – Ontario Drinking Water Standard Maximum Allowable Concentration. Where two numbers are listed in this column the first is the aesthetic objective and the second is the maximum allowable under O. Reg. 169/03.

#### Table 4: Trihalomethanes (THMs) and Haloacetic Acids (HAAs)

| Parameter | Running Annual Average | ODWS<br>MAC | Unit | Exceedance |
|-----------|------------------------|-------------|------|------------|
| THMs      | 8.8                    | 100         | ug/L | No         |
| HAAs      | < 5.3                  | 80          | ug/L | No         |

#### Table 5: Nitrite and Nitrate

| Parameter | Date Sampled | Result | ODWS<br>MAC | Unit | Exceedance |
|-----------|--------------|--------|-------------|------|------------|
|           | 17 Jan 2023  | 0.06   | 1           | mg/L | No         |
| Nitrite   | 17 Apr 2023  | < 0.05 | 1           | mg/L | No         |

#### Table 9: Other Sampling Conducted Outside O. Reg. 170/03

### **Community Lead Testing Program**

Historical low level lead sample results have qualified Clearview for the reduced sampling program under Schedule 15.1 of O. Reg. 170/03. Clearview is exempt from sampling private residences as less than 10% of plumbing samples exceeded the standard for two consecutive periods. Samples from the distribution system are collected during two sampling periods. Winter (Dec. 15 to Apr. 15) and Summer (June 15 to Oct. 15). Alkalinity and pH samples are analyzed in each sampling period, while lead is only required to be tested for every 3 years. Table 10 below summarizes the lead testing program sample results for the reporting period.

#### Table 10: Schedule 15.1 - Lead

| Parameter  | Number of<br>Samples | Min  | Max  | ODWS<br>MAC | Unit                         |
|------------|----------------------|------|------|-------------|------------------------------|
| Lead       | 0                    | -    | -    | 0.010       | mg/L                         |

\*Operational Guidelines

### **Adverse Water Quality Incidents**

No Adverse Water Quality Incidents (AWQIs) occurred during this reporting period.

# **REGULATORY COMPLIANCE SUMMARY**

# Safe Drinking Water Act & Associated Regulations

No non-compliances were identified during this reporting period.

# Municipal Drinking Water Licence & Drinking Water Works Permit

No non-compliances were identified during this reporting period.

## **Permit to Take Water**

No non-compliances were identified during this reporting period.

## **Provincial Orders**

No provincial orders were issued during this reporting period.

# SYSTEM CAPACITY

# **Allowable Capacities**

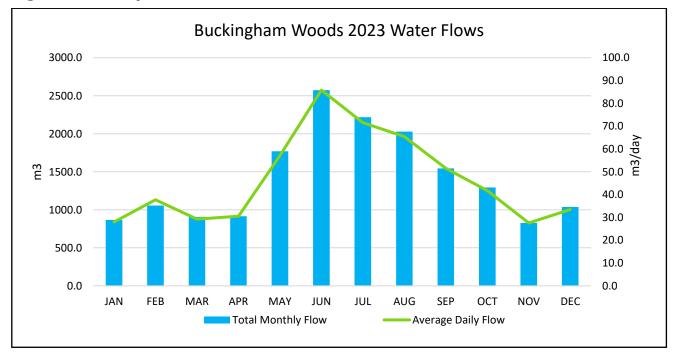

Allowable capacities are imposed on the drinking water system by several legal instruments issued by the Ministry of Environment, Conservation and Parks. They are summarized in Table 11 below.

#### **Table 11: Allowable Capacities**

| Instrument                          | Unit  | Well # 1 | Well # 2 | Well # 3 |  |
|-------------------------------------|---|----------|----------|----------|--|
|                                     | L/min   | 91       | 91       | 85       |  |
| Permit to Take Water                | m³/day  | 131.04   | 131.04   | 121.68   |  |
|                                     | Total from all wells m <sup>3</sup> /day                  | 252.72   |          |          |  |
| Drinking Water Works<br>Permit      | L/sec   | 1.5      | 1.5      | 1.4      |  |
| Municipal Drinking Water<br>Licence | Total supplied to distribution system m <sup>3</sup> /day | 252      |          |          |  |

### **2023 Flow Summary**

The table and charts below summarize the 2023 flow data for the Buckingham Woods drinking water system. This data is a general overview and can be utilized to analyze system performance and the potential need for upgrades.

#### Figure 1: Monthly Flow Totals

Buckingham Woods 2023 Drinking Water Compliance Report

| Yr.    | 17041.8                                 | 46.7  | 137.5   |                                     |                                       |                                |                        |

Note: All capacity values used are based on actual pump outputs and flow rates. Firm pumping capacity is the available flow with the largest pump out of service.

### Figure 2: System Capacity

Buckingham Woods 2023 Drinking Water Compliance Report

In 2023, the day with the largest volume of water produced was July 4<sup>th</sup> with 137.5 m<sup>3</sup>. July 4<sup>th</sup> also saw the largest volume of water consumed by the distribution system at 132.6 m<sup>3</sup>. Figure 3 below depicts the total daily raw water flow and treated water flow for the system.

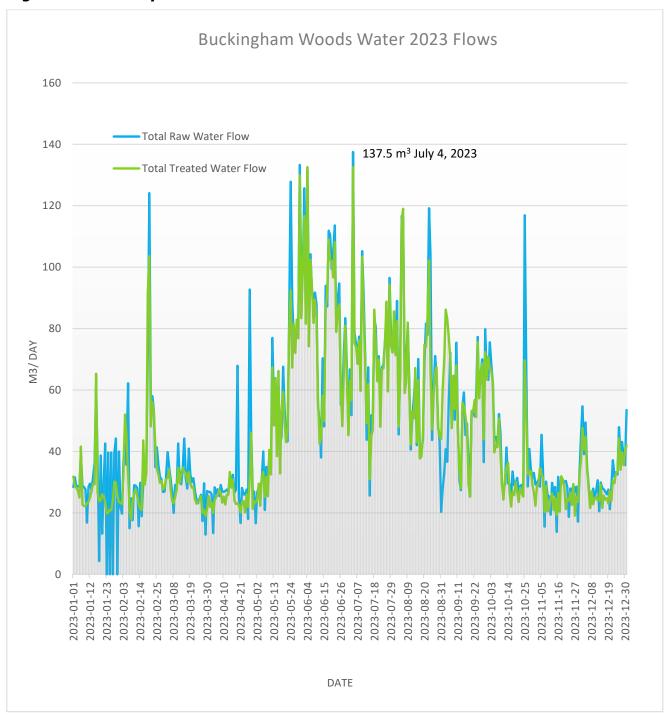

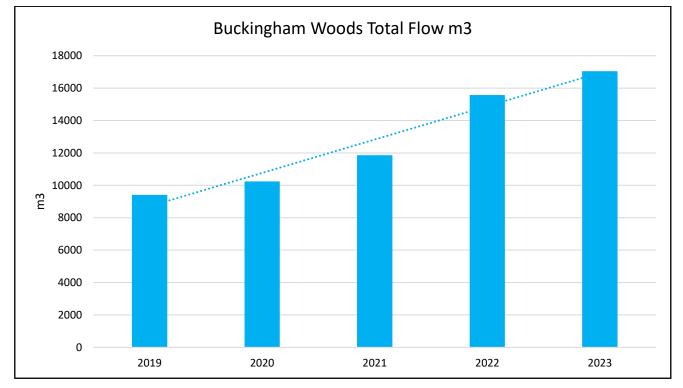

Figure 3: 2023 Daily Flows

From 2022 to 2023 there was a 9.4% increase in flows for the Buckingham Woods drinking water system. Three new houses were connected to the system during 2023, bring the total number of serviced residences to 49. In the last two years there has been an 32% increase in the number of homes connected to the water system. Since 2021, the volume of water used annually by the system has increased by almost 44%. 13 lots remain that are either vacant or at various stages of construction. The system will serve 62 houses at full build out. Figure 4 below shows the total annual flow trend for the drinking water system over the last five years.

#### Figure 4: Five-year Total Flow Comparison
